```python
import pandas as pd
import numpy as np
import scipy.stats as stats
# Load dataset
df = pd.read_csv("/Users/moshika/Downloads/customer_reviews.csv")
# Assume ratings column is named 'rating'
ratings = df["rating"]
# Mean rating
mean_rating = ratings.mean()
# Standard error
std_error = stats.sem(ratings)
# 95% confidence interval
confidence_interval = stats.t.interval(
    confidence: 0.95, *args: len(ratings)-1, loc=mean_rating, scale=std_error
)
lower, upper = confidence_interval
print("Average Rating:", round(mean_rating,2))
print("95% Confidence Interval:", (round(float(lower),2), round(float(upper),2)))
```

```
Average Rating: 4.1
95% Confidence Interval: (3.57, 4.63)
```
