

```
1 import pandas as pd
2 data = {
3     'Product': ['Laptop', 'Phone', 'Tablet', 'Laptop', 'Phone', 'Headphones', 'Tablet', 'Phone'],
4     'Quantity': [10, 15, 5, 7, 8, 12, 6, 9]
5 }
6 sales_df = pd.DataFrame(data)
7
8 # Group by product and calculate total quantity sold
9 top_products = sales_df.groupby('Product')['Quantity'].sum()
10
11 # Sort in descending order and get top 5
12 top_5_products = top_products.sort_values(ascending=False).head(5)
13 print("Top 5 Most Sold Products:")
14 print(top_5_products)
```

Top 5 Most Sold Products:

Product

Phone 32

Laptop 17

Headphones 12

Tablet 11

Name: Quantity, dtype: int64
